SUMMARY

Information Technology undergraduate at the Sri Lanka Institute of Information Technology (SLIIT) with a strong interest in software development and web technologies. Motivated to learn, improve technical skills, and contribute to real-world projects through teamwork and continuous learning. Experienced in full-stack development, web and mobile application design, and UI/UX implementation through academic and client projects. Possess strong problem-solving abilities, adaptability, and a professional attitude, eager to gain industry exposure and contribute to innovative technology solutions.

Technical Skills

- Programming Languages: Java, JavaScript, Python (Beginner)
- Web Development: HTML, CSS, TailwindCSS
- Frameworks & Libraries: React.js, Spring Boot, Node.js (Beginner), Express.js (Beginner)
- Database: MySQL, MongoDB
- Tools & Technologies: Git & Github, VS Code, Postman, Figma, Android Studio
- Development Practices: MVC Architecture, Version Control, Agile Methodology

Professional Skills

- Teamwork & Collaboration
- Communication skills
- Fast learner & adaptability
- Problem-solving
- Time management

Projects

CampusNexus – Smart Campus Operations Hub

March 2026 - Apr 2026

Role: Full Stack Developer (Team Project)

Technologies: React, Spring Boot, Spring Security, MySQL, WebSocket, Git

CampusNexus is a full-stack web-based platform developed to manage university operations, including resource booking, maintenance ticketing, and real-time notifications. The system provides a centralized solution to improve efficiency and reduce manual processes within campus environments.

- Designed and implemented the **Facilities & Assets Catalogue** with full CRUD operations and resource filtering
- Developed a **real-time notification system** using WebSocket for booking updates, ticket changes, and system alerts
- Implemented **Google OAuth 2.0 authentication** with role-based access control (USER, STAFF, ADMIN)

- Built an **Admin Dashboard with analytics**, including top resources, booking trends, and peak usage hours
- Designed and developed multiple frontend pages including **User Home, About, Contact, and Dashboard UI**
- Applied validation and business rules such as **preventing resource deletion with active bookings**
- Contributed to full-stack development including backend APIs and responsive frontend UI design

UniCollab - Smart Study Group Collaboration System

Feb 2026 - Apr 2026

Role: Full Stack Developer (Team Project)

Technologies: React, Node.js, Express.js, MongoDB, Gemini API, Git

UniCollab is a collaborative learning platform designed for university students to create study groups, manage study sessions, and share academic resources. The system also integrates an AI Study Assistant to help users understand academic concepts in real time.

Implemented study group management features including group creation, member handling, and session scheduling. Integrated AI-powered assistance for answering module-related questions and contributed to frontend UI development and overall system design.

Singlish Transliteration Accuracy Testing

May 2026

Role: Automation Tester

Technologies: Python, Playwright, OpenPyXL, Excel, GitHub

Developed an automated testing project to evaluate the accuracy of Singlish to Sinhala transliteration in the Pixelssuite Chat Translator. Designed 50 negative test cases covering 24 Singlish input types, automated test execution using Playwright, and recorded actual outputs and pass/fail results in Excel. Analyzed transliteration failures to identify weaknesses in the system.

ReBuy.lk - Second Hand Goods Marketplace

Aug 2025 - Oct 2025

Role: Full Stack Developer (Team Project)

Technologies: React, Node.js, Express.js, MongoDB, Git

ReBuy.lk is a client-based web application developed using the MERN stack that operates as a second-hand goods marketplace. The system allows suppliers to supply products to the platform, manages inventory through stock management, and supports customer orders and payments. Implemented CRUD operations, integrated RESTful APIs, and collaborated using GitHub.

Online E-Shopping Store

Jan 2025 - Jun 2025

Role: Backend Developer (Team Project)

Technologies: Java, JVM, MySQL, MVC Architecture, Git

Developed an online e-shopping store using Java, featuring user authentication, product browsing, order management, and admin dashboard functionalities. Implemented CRUD operations and database integration while working in a team environment.

WellnessBuddy- Wellness & Habit Tracking Android App

Oct 2025

Role: Android Developer

Technologies: Kotlin, Android Studio, Shared Preferences, Git

Developed a mobile application focused on promoting healthy lifestyle habits, allowing users to track wellness activities and access health-related features through a user-friendly interface. Contributed to UI design and application logic while working in a team environment, gaining experience in mobile app design and development workflows.

Financial Advisor Portfolio

Jan 2026

Role: Frontend Developer

Technologies: React.js, TailwindCSS

A professional, responsive portfolio website developed for a real client, a Financial Advisor working with Sri Lanka Insurance Life. This website is designed using psychological marketing strategies to build trust, highlight achievements, and attract potential insurance clients. Focused on designing a responsive and user-friendly interface while implementing interactive data visualizations. Gained hands-on experience in frontend development.

Education

Sri Lanka Institute of Information Technology (SLIIT)

Nov 2023 - Present

BSc (Hons) in IT (Specializing in Information Technology)

- Maintained a CGPA of 3.78 out of 4.00

Gnanodaya National College, Kalutara, Sri Lanka

2008- 2022

- GCE Advanced Level Exam (Commerce Stream)
- GCE Ordinary Level Exam
